

PRODUCT INFORMATION**Y•TEX[®]**
BRUTE[®]
Pour-On for Cattle

**For economical, convenient,
and long-lasting residual control of
Buffalo flies & cattle lice on beef cattle.**

DESCRIPTION: BRUTE Pour-On for cattle is a ready-to-use formulation containing permethrin, a synthetic pyrethroid highly effective against Buffalo flies & cattle lice.

EFFECTIVENESS: BRUTE Pour-On for cattle can be effective against pyrethroid susceptible Buffalo fly for up to 4 weeks. The length of residual protection against Buffalo flies will vary depending on the level of insecticide resistance within a particular area. BRUTE Pour-On is effective against biting lice and two species of sucking lice.

PACKAGING: BRUTE Pour-On for cattle is available in a ONE LITRE pack with a convenient measuring chamber on top for easy application, a FIVE LITRE Gun Applicator pack and a FIVE LITRE Refill pack.

ACTIVE CONSTITUENT:
87g/L Permethrin*
(25:75 cis:trans)

PRODUCT ADVANTAGES

- 1 Ready-to-use, no dilution necessary
- 2 Easy to apply - just pour along the backline of each animal.
- 3 Highly concentrated formulation allows for a low volume dose rate - a maximum of 15ml per animal.
- 4 Extremely cost effective providing economical residual protection
- 5 A low toxicity formulation with little or no risk of irritation to the skin of animals and operators
- 6 No label contraindications
- can be used with other treatments and medications.
- 7 Short withholding period.
- 8 ONE LITRE treats 66 head at the maximum dose rate. The FIVE LITRE pack will treat 333 head at this rate.
- 9 Rainfast. Persistence in the hair of animals enhances residual protection.
- 10 Classified as a non-cyano pyrethroid. Crossover resistance to other pyrethroids tend to be lower in this class.
- 11 Can be used in conjunction with Y-TEX Insecticidal ear tags in a strategic insecticide management program for Buffalo fly control.
